

Question: *How easy is this Hot Tub base (pad) preparation and hot tub installation?*

The pictures pretty much show how fast and easy it is to install an above-ground, outdoor (exterior) hot tub. Of course, preparing the ground and ***pouring a concrete pad for the hot tub*** is the hardest part of the entire installation.

Not any more - using ***eco-friendly StabiliGrid™*** instead of concrete or other high-impact construction methods.

Advantages of using environmentally-sound StabiliGrid™:

- ◆ Fast & easy ground preparation.
- ◆ Simple and durable pad construction.
- ◆ Easily relocated or reinstalled in the future.
- ◆ Low impact development: the ground may be easily returned to its original native state, if the hot tub is ever moved.
- ◆ 100% recycled content - 100% recycleable.

Category: ***Do it yourself home improvements and hot tub installation.***

Before ...

Ground is graded level.

Overview of the hot tub installation pad area.

Minimal leveling layer of porous gravel is compacted.

StabiliGrid™ pervious pavers installed - app. 3 minutes.

Confirm the hot tub pad is level.

Overhead view of the outdoor hot tub base.

Installing the hot tub on the base - app. 5 minutes.

Use of free labor (son and friend's son) greatly encouraged.

Overhead view of the hot tub, ready for the water and power.

Installing the cover for the exterior hot tub.

Finished in time for the early Saturday morning football games.

Answer: ***Hot Tub base (pad) preparation and installation are mighty simple, clean and easily DIY'ed, using StabiliGrid™.***
